

BEACHCOMBER'S

Protec 4WALL™

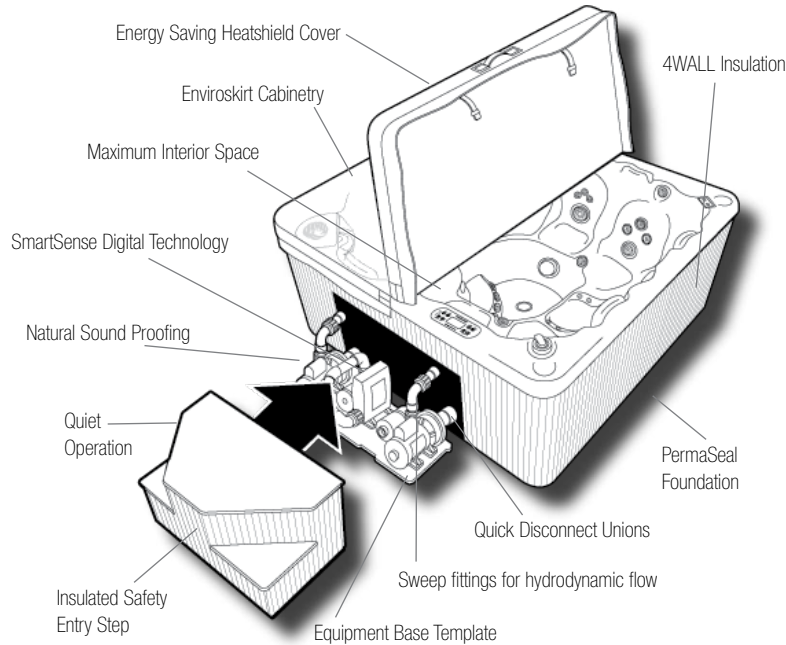

Proper Engineering Pays Off

Protec gives you a hand built, well thought out product. With Beachcomber's Protec Construction method and 4WALL Insulation, you get energy efficiency, safety, ease of use and of course, a great looking hot tub.

Designed to Operate in Any Climate

If you are serious about year round enjoyment and therapy in hot water, consider a Protec equipped Beachcomber. We began building them with the harsh Canadian winter in mind, to perform year round, even in the coldest weather. You can enjoy your hot tub outside, no matter what the temperature.

Wrenches Not Required

Part of our philosophy of environmental conservation is our Guarantee With Beachcomber's engineering and commitment to quality we truly believe that you will never need service. But if you do, we want it to be the least of your worries. Our famous No Fine Print Guarantee gives peace of mind. We build an energy efficient, quality hot tub, and are proud to stand behind it.

Efficient Just Like Your Home

Would you leave the insulation out of the walls of your house? That is a simple question, really. Of course the answer is no. And it is the reason we have used our 4WALL Insulation method since the first Protec hot tub was built in 1983. Protec prevents air movement, giving you protection against heat loss. We have been building it the same way since then, a track record that you can count on for an energy efficient hot tub.

Building an energy-conscious Beachcomber Hot Tub.

Large, Deep Soaking

When we first designed Protec, we wanted to maximize our interior space to give more room for people. Our trademark deep footwell and contoured seating areas give you maximum comfort. Enjoy and stretch out with family and friends.

Maintenance-Free Finish

Enviroskirt plays a critical part of the hot tub's integrated unit construction. With tongue and groove construction, it is tough, durable and it looks like real wood with its embossed finish. Enviroskirt, made with recycled plastic, finishes your hot tub perfectly.

Quick Disconnect 'Formula One' Style Service

Our 'cab forward' external equipment design gives you maximum interior space inside the hot tub. It's like the Formula One car concept, with easy to access components. Everything is easily reached for quick service if it's needed, with the safety step cover doubling as your entry and exit route.

4WALL™ Insulation Prevents Heat Loss

A house with no insulation would let the draft come in and out, and worst of all, waste precious energy and money. We've built this time proven method of construction since 1983. We know it will give you the best performance, in any weather, in any climate.

Energy Saving Heatshield Cover

Capping your hot tub is an important part of quality construction. Our Heatshield Covers conform to ASTM standards, to give you years of top performance.

Truth in Design

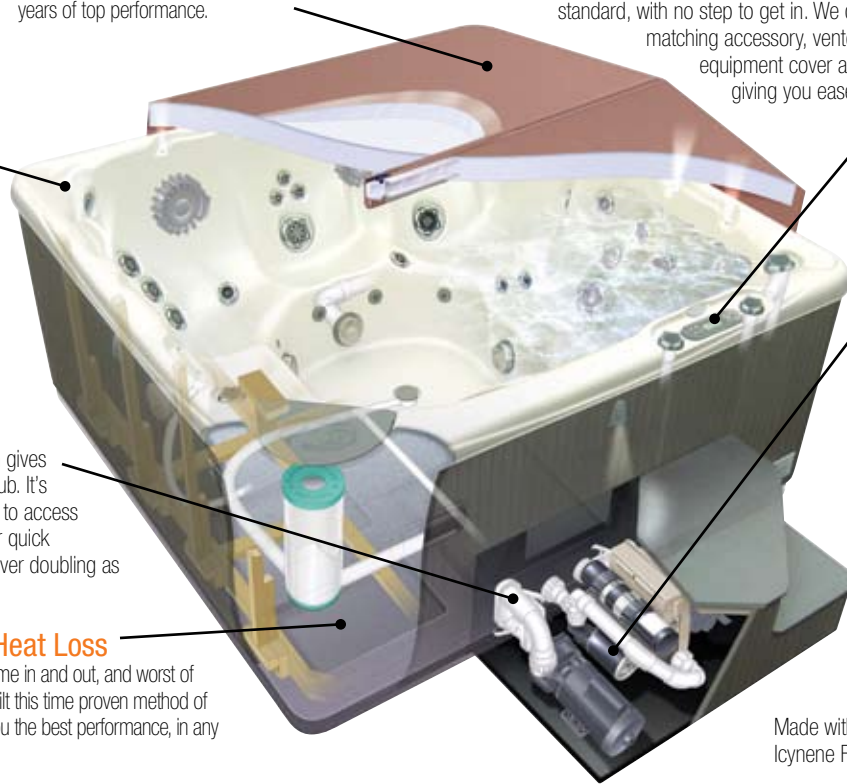

It may seem like a simple thing but pioneering the entry safety step was an important part of our development. Most manufacturers built the accepted standard, with no step to get in. We designed our own step, a custom built, matching accessory, vented and insulated. It doubles as the equipment cover and completes the hot tub experience, giving you ease of access every time.

SmartSense Technology

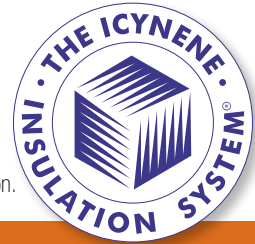

This state of the art digital panel is programmable, allowing you to choose your filtration cycles, reminders and more. Our equipment package comes with its custom made base.

The Small but Mighty HushPump

The low cost, low electricity draw HushPump gives 100% water filtration, cleaning and heating, 24 hours a day. It turns the water over in the hot tub more than 100 times a day, conforming to our commitment to energy efficient operation.

Made with 100% Icynene Foam Insulation.

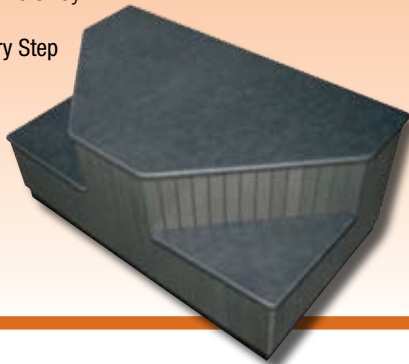

7 EXTRA BENEFITS OF PROTEC 4WALL CONSTRUCTION

Protec 4WALL built for today's consumer

Moving the power source outside the hot tub cavity gives you extra benefits that ensures comfort and energy efficiency.

1 Double Tiered Safety Entry Step

This custom built accessory gives you a safe, easy way to get in and out of your hot tub. It's a tough built, quality insulated step.

2 Natural Soundproofing

Maintenance free Enviroskirt, coupled with Protec 4WALL construction method gives you an integrated, quiet hot tub.

3 4WALL Insulation Package

All 4 walls are filled to keep heat in and cold out. It's a Beachcomber Protec standard, versus the traditional 3 wall construction method.

4 Energy Efficient Operation

The Protec Construction Package is an integrated unit. It works together to give you the best quality, most energy efficient hot tub.

5 Maximum Interior Space Design

With the external power source design, we can focus on form, fit and function for maximum space for people inside the hot tub.

6 Quick Service Access

Our equipment technology design gives you quick disconnect union kits for easy service and accessibility.

7 Quiet, Efficient Operation

HushPump cleaning, heating, circulation and filtration gives you clean, sparkling water. It runs almost silent, 24/7/365.
